

Final Practice

Spring '25

1. Is the following a valid vector space:

The set of vectors $\{(a, b) \in \mathbb{R}^2 : b = 2a + 5\}$

2. Are the following vectors linearly independent or dependent?

$$\vec{v}_1 = (2, 1, 1, 5), \vec{v}_2 = (2, 2, 1, 1), \vec{v}_3 = (3, -1, 6, 1), \vec{v}_4 = (1, 1, 1, -1)$$

3. Suppose $\mathbf{v}_1, \mathbf{v}_2, \mathbf{v}_3 \in \mathbb{R}^2$. Can these vectors be linearly independent? Why or why not?
4. If a set of vectors $\{\mathbf{v}_1, \mathbf{v}_2, \mathbf{v}_3, \mathbf{v}_4\}$ in $\mathbb{R}^4$ is linearly independent, is every subset of 3 vectors also linearly independent?
5. If a square matrix E has linearly dependent columns, what can you say about:

- $\det(E)$
- E^{-1}
- The rank of E

6. A website receives traffic at a rate of $r(t) = 50e^{-0.1t}$ requests per minute, where t is the number of minutes since midnight. How many requests are received in the first 10 minutes?
7. For a square matrix A , consider the statements:

P : “ A is invertible”

Q : “Determinant of A is not 0”

Determine which statement is necessary and which statement is sufficient for the other.

8. Let $\mathbf{u} = (1, 2, -1)$ and $\mathbf{v} = (2, -1, k)$. Find k such that $\mathbf{u}$ and $\mathbf{v}$ are orthogonal.

9. In a machine learning cost function $J(\theta_1, \theta_2) = \theta_1^2 + 4\theta_1\theta_2 + 5\theta_2^2$, at point $(1, -1)$, in which direction should the gradient descent algorithm move for **steepest decrease**?
10. Let X and Y be independent with $E[X] = 1, \text{Var}(X) = 2, E[Y] = 4, \text{Var}(Y) = 3$. Compute $E[3X - 2Y]$ and $\text{Var}(3X - 2Y)$.
11. From a group of 6 men and 4 women, a 3-person team is to be selected. How many teams contain **at least 1 woman**?
12. Prove the following using induction:
 $2^{n+2} + 3^{2n+1}$ is divisible by 7 for all positive integers n
13. Two fair dice are rolled. Given that the sum is **even**, what is the probability that the sum is **8**?
14. A honeybee drone has an expected lifespan of 45 days and standard deviation of 45. You collect one thousand honeybee drones. What is the probability that the average lifespan for all 1000 honeybee drones will be above 47 days?
 There is a 10% probability that the average lifespan for all 1000 honeybee drones will be less than what age?
15. Suppose you are trying to do a study on acupuncture on how effective it is in pain relief. You measure sensory rates for 15 subjects and get the following results:
 8.6, 9.4, 7.9, 6.8, 8.3, 7.3, 9.2, 9.6, 8.7, 11.4, 10.3, 5.4, 8.1, 5.5, 6.9
 Construct a 95% confidence interval for the mean sensory rate for the population.

Confidence level	Critical (z) value to be used in confidence interval calculation
50%	0.67449
75%	1.15035
90%	1.64485
95%	1.95996
97%	2.17009
99%	2.57583
99.9%	3.29053
