

Archaeological Fieldwork

For those students new to archaeology, this section provides an overview of the archaeological research process so that you can understand what archaeologists do in the field, how they find and identify sites, how they excavate them, and how they make decisions about the entire process. We will explore these questions through a case study of a real archaeological project, the Kaymakçı Archaeological Project (<https://gygaia.org/excavations-at-kaymakci/>), which began at Boston University and is now run by faculty at Koç University in Istanbul, Turkey. Begin by reading a short summary of the project on BU Today (<https://www.bu.edu/articles/2014/turkey-archaeology/>).
