Test Content

Question 1

1 Point

Select the most correct and complete definition of secondary data in zooarchaeology.

- ☐ A. population-level data extrapolated from the assemblage of skeletal elements examined
- ☐ B. sample-level data determined directly from observation of specific skeletal elements
- ☐ C. sample-level data extrapolated from the assemblage of skeletal elements examined
- ☐ D. sample-level data calculated statistically based on the observation of specific skeletal elements

Question 2

1 Point

Which of the following is the organic portion of bone? Chose the most accurate answer.

- ☐ A. collagen
- ☐ B. hydroxyapatite
- ☐ C. medullary cavity
- ☐ D. cartilage

Question 3

1 Point

Match these archaeological terms with their correct definitions.

Prompts

Answers

① features

Select match ▼

② ecofacts

Select match ▼

③ artifacts

Select match ▼

④ material remains

Select match ▼

Question 4

1 Point

Select the most correct and complete definition of the relationship between the terms hominin and primate.

☐ A. all hominins are primates, but not all primates are hominins

☐ B. hominins are extinct, primates exist today

☐ C. humans are primates but not hominins

☐ D. bipedal hominins are humans, not primates

Question 5

1 Point

Which of the following are “modern” human behaviors that originated during the Middle Stone Age of Africa? Choose all correct answers.

☐ A. fishing

☐ B. bone tools

☐ C. stone tools

☐ D. agriculture

Select up to 4 options

Question 6

1 Point

Which of the following are evidence for the use of fire found in the archaeological record of the Paleolithic?
Choose all correct answers.

☐ A. remains of hearths

☐ B. rubefaction of soil

☐ C. accumulations of charcoal

☐ D. micromorphological evidence of ash, microcharcoal, and fire-altered minerals

Select up to 4 options

Question 7

1 Point

Select the most correct and complete explanation of the relationship between the Paleolithic and the Pleistocene.

☐ A. the Pleistocene is a geological period, while the Paleolithic is an archaeological era; the two are roughly contemporary

☐ B. the Pleistocene is a geological period, while the Paleolithic is an archaeological era; the two are sequential, with the Paleolithic earlier

☐ C. the Paleolithic is a geological period, while the Pleistocene is an archaeological era; the two are roughly contemporary

☐ D. the Paleolithic is a geological period, while the Pleistocene is an archaeological era; the two are sequential, with the Paleolithic earlier

Question 8

1 Point

Which of the concepts listed below does not originate in geology?

- ☐ A. uniformitarianism
- ☐ B. stratigraphy
- ☐ C. superposition
- ☐ D. chemical residue analysis

Question 9

1 Point

Name the protein component of bone.

Enter answer

Name the inorganic component of bone.

Enter answer

Question 10

1 Point

Match these hominin species with their diet, as best we understand it.

Prompts

Answers

1 *Paranthropus boisei*

Select match

▼

2 *Homo habilis*

Select match

▼

3 Neanderthals

Select match ▼

4 Neolithic *Homo sapiens*

Select match ▼

Question 11

1 Point

Which of the following are evidence for the use of fire found in the archaeological record of the Paleolithic?
Choose all correct answers.

☐ A. remains of hearths

☐ B. rubefaction of soil

☐ C. accumulations of charcoal

☐ D. micromorphological evidence of ash, microcharcoal, and fire-altered minerals

Select up to 4 options

Question 12

1 Point

Which of the following foods were available to Upper Paleolithic hunters and foragers? Choose all correct answers.

☐ A. megafauna

☐ B. fish

☐ C. shellfish

☐ D. underground storage organs

Select up to 4 options

Question 13

1 Point

Select the most correct and complete definition of dental calculus.

☐ A. mineralized dental plaque

☐ B. evidence of a disease of the teeth and gums

☐ C. a mathematical approach to studying tooth shape

☐ D. a taphonomic process that affects archaeological teeth

Question 14

1 Point

Which of the following bones is the best for estimating age at death of an animal? Chose the most accurate answer.

☐ A. pelvis

☐ B. teeth

☐ C. shape of the cranium

☐ D. length of long bones

Question 15

1 Point

Which of the following bones is the best for estimating sex of an animal? Chose the most accurate answer.

☐ A. pelvis

☐ B. teeth

☐ C. shape of the cranium

☐ D. length of long bones

Question 16

10 Points

Be sure to answer all elements of the question for the essay prompt below. Please write in complete sentences.

You are a zooarchaeologist excavating a site in a coastal region of what is today South Carolina. You sieve all the soil from your excavation using a 1/4-inch (6.35 mm) wire mesh and find that the bones are nearly all those of white-tailed deer with very few fish remains. What is your initial conclusion about hunting and fishing at this site?

After you publish your initial findings, your project's paleoethnobotanist shares with you that the site's flotation samples are filled with small fish bones, all consistently of fish with a body diameter of around 1 inch (2.5 cm). In the flotation samples, these fish bones outnumber deer bones by a ratio of 100 to 1.

Reassess hunting and fishing at this site: what was the main source of animal protein? What technology was likely used to catch these fish?
